BUIP113: Support Bitcoin SV with an Official Implementation

Submitted by: Griffith
Date: 2019/3/27
Revised: 2019/4/14

Summary

The purpose of this BUIP is to officially add BSV as a supported coin with equal status as BCH instead of considering it a HF configuration option.

Proposal

BSV should be officially supported by as an independent coin from BCH by BU in future releases.

In the event that this BUIP passes, BSV will be considered officially supported by BU as a viable chain that will one day fulfil BU's collective vision for peer to peer electronic cash that can scale to meet global usage.

For reference, BTC was officially supported on the birth of the organization, BCH support was officially added with BUIP 063, BSV HF configuration changes support was added in BUIP 098, and BUIP 113 would officially recognize BSV as a coin and add support for it.
